## Claim Amendment under 37 CFR 1.121(c)

- 1. (Currently amended) A guide <del>plate</del> and instruction plate using photo luminescent porcelain enamel,
- 5 comprising:

10

25

an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and a secondary coat enamel are processed; and

a ground surface is—disposed on the plate and processed with non-photo luminescent porcelain enamel; and

- one or more pattern surfaces disposed on the plate

  and comprising character, number, symbol, graphic, and

  image, pattern, etc. of the guide plate and instruction

  plate are molded with photo luminescent porcelain enamel.
- 20 2. (Currently amended) A guide <del>plate</del> and instruction plate using photo luminescent porcelain enamel, comprising:

an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and a secondary coat enamel are processed, and;

a ground surface is disposed on the plate and

processed with photo luminescent porcelain enamel; and

one or more surfaces disposed on the plate and

comprising character, number, symbol, graphic, and image,

pattern, etc. of the guide plate and instruction plate

are molded with non-photo luminescent porcelain enamel.

- 3. (Currently amended) A guide plate—and instruction plate—using photo—luminescent porcelain enamel, comprising:
- an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and a secondary coat enamel are processed; and
- a ground surface is disposed on the plate and processed with non-photo luminescent coloring oil (or enamel material); and

10

25

- one or more pattern surfaces disposed on the plate and comprising character, number, symbol, graphic, and image, pattern, etc. of the guide plate and instruction plate are processed with photo luminescent enamel.
- 20 4. (Currently amended) A guide <del>plate</del> and instruction plate using photo luminescent porcelain enamel, comprising:
  - an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and a secondary coat enamel are processed, and;
- a ground surface is disposed on the plate and processed with photo luminescent enamel; and
  - one or more pattern surfaces disposed on the plate and comprising character, number, symbol, graphic, and image, pattern, etc. of the guide plate and instruction plate are processed with non-photo luminescent coloring

oil (or enamel material).

30

5. (Currently amended) A guide plate and instruction plate using photo luminescent porcelain enamel, comprising:

an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and secondary coat enamel are processed, and;

a ground surface is disposed on the plate and processed with photo luminescent enamel; and

one or more pattern surfaces disposed on the plate
and comprising character, number, symbol, graphic, and
image, pattern, etc. of the guide plate and instruction
plate are processed using a heat transfer printing paper.

6. (Currently amended) A guide paper and instruction
20 plate using photo luminescent porcelain enamel,
comprising:

an improved guide plate and instruction plate implemented in such a manner that aluminum, steel, copper, alloy plate, etc., after removing of anti-rust oil (lubricant), are preprocessed for an easier adherence, and a primary coat enamel and secondary coat enamel are processed, and;

a ground surface is disposed on the plate processed with non-photo luminescent coloring oil (or enamel); and one or more pattern surfaces disposed on the plated and comprising character, number, symbol, graphic, and image, pattern, etc. of the guide plate and instruction plate are processed using a heat transfer printing paper.
